Hi Rob: At last week's Flathead Basin Commission meeting I gave a quick update on the CFAC site per your information below. We also discussed having you attend the April 9, 2014 FBC meeting in Pablo (south of Polson about 15 miles at Confederated Salish and Kootenai Tribal Headquarters). With the proposed release of the site reassessment report by the end of March I was thinking the time might be right for you to come to the Flathead and provide updates. In addition to the FBC meeting, EPA might also want to consider other information outreach meetings.

Let me know if this trip might be doable!

Hi Julie,

I haven't seen any data from CFAC yet. The contractor is receiving data right now from the various labs, but I've asked the contractor to validate all of the detections, and put it into an electronic database prior to sending it over to me. I anticipate it might be another month or so before I get that product. I have told our contractor that if there is any indication that water is being consumed above a MCL or other health standard that they should tell me about it so we can inform the well owner as soon as possible.

As of now, I don't foresee anything that will prevent us from completing the site reassessment report by the end of March, which is when we told Senators Baucus and Tester we'd be finished by.

Rob

Hi rob
Do we have data back from fall sampling? Julie
